

FUNCTION AND ZONING ANALYSIS 区域功能分析

2-STOREY RESTAURANT

For the most efficient guest flow distribution from upstairs to downstairs in two-story restaurants, it is recommended to locate the staircase between the main entrance and main dining area. The staircase could be a well-designed feature.

On the 2nd floor, the entrance design is the same as on the 1st floor and some back-of house space is allocated. Dumbwaiter elevators for food delivery are necessary to complement those two floors.

两层平面的图块分析

两层楼面的餐厅，建议楼梯设置在入口与大堂就餐区中间，可以最有效的分流去楼上或楼下、大堂半包区以及包房区的客流，并装饰性强。

二层需设置同一层一样的主入口。并且整层作为包房区，仅预留部分空间为厨房后区，上下层可设置两部食梯让送餐等服务互补。
